

# Human Factor Considerations in Risk Management Practice

This workshop will examine the influence of the human cognitive decision-making process on the risk assessment and management process. We will look at how risk is interpreted differently based on a variety of normal human traits – and how this influences the ultimate risk management decisions taken in the workplace.

A real eye-opener, this workshop will lead to a total revamp of your present risk assessment and management program! We will work through a number of real-life case studies, combining these into a practical risk management framework.

We will examine:

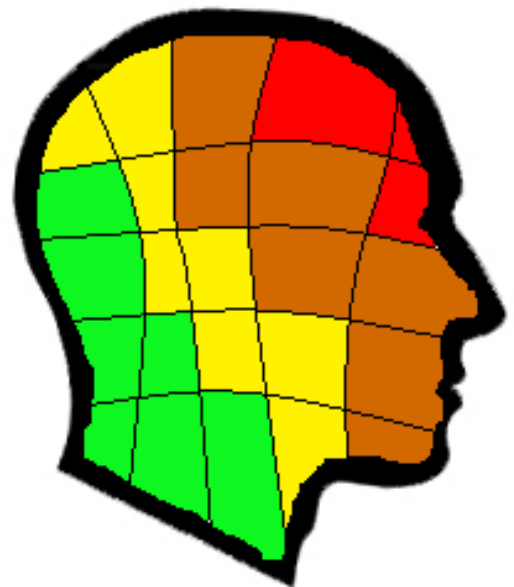

- 'Behaviour' into the Hazard definition
- Perception
- Cognition
- Decision-making
- Risk Analysis overview
- Understanding the human influence in risk assessment

## Target Audience:

The workshop will be of particular benefit to Risk Management and Safety Professionals seeking an understanding of the “human factor” in the risk management process.

## Duration:

1 day
